Preface ix

Part 1. General Principles **1**

1. Phase Equilibria 3
   - 1.1 Introduction 3
   - 1.2 Thermodynamic Framework for Phase Equilibria 4
   - 1.3 Fugacity Coefficients 12
   - 1.4 Activity Coefficients 24
   - 1.5 Vapor-Liquid Equilibria and Liquid-Liquid Equilibria 34
   - 1.6 Fluid-Solid Equilibrium 45
   - 1.7. High Pressure Vapor-Liquid Equilibria 51
   - 1.8 Summary 54

   Notation 54

   References 57

2. Mass Transfer Principles 60
   - 2.1 Introduction 60
   - 2.2 Conservation Laws 61
   - 2.3 Molecular Diffusion 70
   - 2.4 Mass Transfer in Turbulent Flow 100
   - 2.5 Notation 121

   References 123

3. Phase Segregation 129
   - 3.1 Basic Mechanisms and Analogies 129
   - 3.2 Gas-Liquid Segregation 132
   - 3.3 Immiscible Liquid Segregation 148

3.4 Liquid-Solid Segregation 157
3.5 Gas-Solid Segregation 176
Notation 193
References 195
4. General Processing Considerations 197
4.1 Methods of Operation 197
4.2 Process Synthesis 204
4.3 Control of Separation Processes 218
4.4 Special Problems 220
References 222

Part 2. Individual Separation Processes 227

5. Distillation 229
5.1 Introduction 229
5.2 Phase Equilibrium 231
5.3 Equilibrium Stages 238
5.4 Specification of Variables 258
5.5 Special Distillations 261
5.6 Transfer Units 275
5.7 Tray-Type Distillation Columns 276
5.8 Packed-Type Distillation Columns 295
5.9 Mass Transfer in Tray Columns 312
5.10 Mass Transfer in Packed Columns 323
5.11 Distillation Column Control 328
Notation 331
References 335
6. Absorption and Stripping 340
6.1 Basic Concepts 340
6.2 Multistage Contactors 354
6.3 Differential Contactors 364
6.4 Predicting Contactor Performance 379
Notation 400
References 402

This page has been reformatted by Knovel to provide easier navigation.

7. Extraction – Organic Chemicals Processing 405
7.1 Diffusion and Mass Transfer 405
7.2 Equilibrium Considerations 414
7.3 Stagewise and Differential Contacting Calculation Methods 415
7.4 Stagewise Contact in Perforated Plate Columns 432
7.5 Stagewise Contact in Mixer-Settlers 434
7.6 Mechanically Agitated Columns 438
7.7 Performance and Efficiency of Selected Contactors 441
7.8 Solvent and Process Selection 445
Notation 456
References 461
8. Extraction – Metals Processing 467
8.1 Introduction 467
8.2 Extraction Chemistry and Reagents 467
8.3 Phase Equilibria 477
8.4 Extraction Kinetics 486
8.5 Contacting Equipment and Design Calculations 490
8.6 Process Design and Engineering 495
8.7 Summary 496
References 496
9. Leaching – Metals Applications 500
9.1 Introduction 500
9.2 Leaching Practice 504
9.3 Thermodynamics of Leaching 522
9.4 Kinetics of Leaching 529
Notation 536
References 536
10. Leaching – Organic Materials 540
10.1 Definition of Process 540
10.2 Contacting Methods 540
10.3 Industrial Leaching Equipment 541

DropBooks

This page has been reformatted by Knovel to provide easier navigation.

10.4 Products, Raw Materials, and Extraction Conditions 550
10.5 Phase Equilibrium 550
10.6 Multistage Equilibrium Countercurrent Extraction 550
10.7 Ficks's Laws 554
10.8 Unsteady-State Batch Extraction 555
10.9 Solute Diffusivities 557
10.10 Fixed Beds 558
10.11 Axial Dispersion and Flow Maldistribution 560
10.12 Superposition-Multistage Countercurrent Extraction 563
10.13 Continuous Countercurrent Extraction 564
10.14 Diffusion Batteries Performance 566
10.15 Differential Extraction 566
10.16 Reflux Extractors 566
10.17 Solubilization 567
10.18 Solvent Selection 567
10.19 Equipment Selection 568
10.20 Solids Feed Preparation 568
10.21 Spent Solids Treatment 569
10.22 Hydrodynamic Considerations 569
10.23 Solid-Liquid Heat Exchange 569
Notation 570
References 573
11. Crystallization Operations 578
11.1 Introductory Comments 578
11.2 Fundamentals 580
11.3 Solution Crystallization 606
11.4 Melt Crystallization 626
11.5 General Design and Operational Considerations 635
Notation 638
References 639
General Bibliography 642

This page has been reformatted by Knovel to provide easier navigation.

12. Adsorption 644
12.1 Introduction 644
12.2 Adsorbents 645
12.3 Criteria for Adsorption Use 653
12.4 Basic Adsorption Cycles 654
12.5 Process Flowsheets 659
12.6 Selecting a Process 668
12.7 Process-Design Considerations 669
12.8 Future Directions for Adsorption Technology and Uses 690
References 691
13. Ion Exchange 697
13.1 Principles of Ion Exchange 697
13.2 Applications of Ion Exchange 711
13.3 Equipment for Ion Exchange 717
13.4 Recent Developments in Ion Exchange 726
Notation 729
References 730
14. Large-Scale Chromatography 733
14.1 Theory 733
14.2 Scale-Up of Elution Chromatography 739
14.3 Countercurrent and Simulated Countercurrent Systems 745
14.4 Hybrid Systems 751
14.5 Other Alternatives 753
14.6 System Comparisons 756
Acknowledgment 756
References 757
15. Separation Processes Based on Reversible Chemical Complexation 760
Summary 760
15.1 Introduction 761
15.2 Specific Examples 764

DropBooks

References 772
16. Bubble and Foam Separations – Ore Flotation 775
16.1 Introduction 775
16.2 Flotation Techniques 775
16.3 Physicochemical Principles 779
16.4 Flotaids 792
16.5 Variables in Flotation 796
References 800
17. Bubble and Foam Separations – Waste Treatment 806
17.1 Background 806
17.2 Theory of Separation 809
17.3 Laboratory Studies 814
17.4 Role of Column Design 818
17.5 Larger-Scale Studies 818
17.6 Applications 822
17.7 Conclusions 822
References 823
18. Ultrafiltration and Reverse Osmosis 826
18.1 Ultrafiltration 826
18.2 Reverse Osmosis 836
References 839
Bibliography 839
19. Recent Advances in Liquid Membrane Technology 840
19.1 Introduction 840
19.2 General Description of Liquid Membranes 840
19.3 Principles of Separation 841
19.4 Practical Applications for Liquid Membranes 845
19.5 Conclusions 858
References 858
20. Separation of Gaseous Mixtures Using Polymer Membranes 862
20.1 Introduction 862

This page has been reformatted by Knovel to provide easier navigation.

20.2 General Design Procedures and Application Examples 872
20.3 Measurement and Phenomenological Description of Gas Sorption and Transport in Polymers 883
20.4 Fundamentals of Sorption and Transport Processes in Polymers 896
20.5 Characterization of Asymmetric Membranes 916
20.6 Modeling and Design Considerations 920
Notation 944
References 944
21. Membrane Processes – Dialysis and Electrodialysis 954
21.1 Dialysis 954
21.2 Electrodialysis 968
Notation for Section 21.1 977
References 978
22. Selection of a Separation Process 982
22.1 Introduction 982
22.2 Initial Screening 982
22.3 Choosing the Base Case 992
22.4 Process Simulation 992
22.5 Process Synthesis 993
Notation 994
References 995
Index **997**
